

DIP KUMAR KAPAT

Senior Product Designer & Frontend Engineer

UI/UX Design · Figma · React/Next.js · Design Systems · Complex Workflows

Kolkata, West Bengal, India | dipkrkapat@protonmail.com | 9903359927

Portfolio: <https://dipkumarkapat.com> | GitHub: <https://github.com/dipkapat>

PROFESSIONAL SUMMARY

Senior Product Designer and Frontend Engineer with 18+ years of web/UI development experience. Shipped 25+ production modules across the complete design-to-code pipeline for a school-management platform serving 10–15 schools and 5,000–8,000 end users. Expert in translating complex, high-stakes workflows (admissions, payroll, fees, analytics) into clear, intuitive interfaces. Deep proficiency in Figma, design systems, React/Next.js, and Tailwind CSS. Comfortable working independently, leveraging AI-assisted tools (Claude Code, Cursor) for implementation velocity without sacrificing design judgment. Seeking a role where I can define design direction and lead product quality from concept to production.

CORE SKILLS

UI/UX & Design: Figma (components, variables, design systems), wireframing, high-fidelity prototyping, design systems architecture, design-to-code conversion, interaction design, accessibility

Frontend Engineering: React, Next.js, TypeScript, Tailwind CSS, component architecture, responsive design, Framer Motion, Shadcn UI, Git/GitHub

Product & Domain: Complex SaaS workflows, payroll & HR systems, financial data visualization, multi-step validation flows, role-based access control, error state design, data-heavy dashboards

AI-Assisted Development: Claude Code, Cursor for component generation, refactoring, and iteration-while maintaining code quality and design fidelity

PROFESSIONAL EXPERIENCE

Senior UI/UX Designer & Frontend Engineer | Adhyan Digital Pvt. Ltd., Kolkata | August 2020 - April 2026

25+ production modules shipped across design-to-code pipeline (Figma → React/Next.js) for a school-management SaaS platform used by 10–15 schools serving 5,000–8,000 administrators, staff, and parents/students. Worked largely independently with minimal oversight, establishing design direction and execution standards.

- **Design System & Component Library:** Defined and maintained design system across all 25+ modules, establishing component naming taxonomy, design tokens, interaction patterns, and accessibility standards that engineering built from directly. Created living documentation and pattern library to ensure consistency across the platform.

- **Admission & Fee-Collection Workflow:** Designed and implemented the end-to-end multi-step admission workflow and fee-collection UI. Transformed a paper-based process into a digital flow with real-time validation, fee tracking, and status visibility for parents and administrators. Reduced manual reconciliation errors significantly by introducing transparent payment status feedback, pending states, and retry mechanisms.

- **Employee Management & Payroll Module:** Delivered the HR/payroll module UI with role-based views for administrators vs. staff. Designed salary calculations, payment history, and payroll reports with emphasis on accuracy and clarity. Established permissions architecture to ensure different user roles see appropriate data.

- **Data-Heavy Dashboards & Analytics:** Built dashboard and reporting screens (tables, charts, filters, exports) for school administrators to track academic, attendance, and financial performance. Designed information hierarchy to make complex data accessible without sacrificing completeness.

- **Figma-to-Production Pipeline:** Created wireframes and interactive prototypes in Figma directly with stakeholders, then implemented them as production React components using Next.js and Tailwind CSS. Owned the full design-to-code pipeline, bridging design intent with engineering reality.

- **Frontend Engineering & Performance:** Converted designs into responsive, production-ready React components using component libraries (Shadcn UI, Flowbite) and Tailwind CSS. Implemented micro-interactions with Framer Motion to improve perceived responsiveness. Diagnosed and resolved HTML/CSS/browser compatibility issues in live environments.
- **AI-Assisted Development:** Adopted Claude Code and Cursor to accelerate repetitive component generation and refactoring while maintaining production standards and design fidelity. Used AI for exploration and alternatives without letting it drive design decisions.

HTML/Web Designer | Vawsum Schools Pvt. Ltd., Kolkata | February 2018 - August 2019

- Designed and built responsive web pages and UI layouts (HTML5/CSS3) for education-technology platform; worked directly with product and engineering teams on frontend-backend integration and SEO fundamentals.

Web/UI Designer | Multiple Organizations, Kolkata | 2006 - 2019

- Progressed from Web Designer to Senior Web/UI Designer across 8 roles (Apex Division, Max Mobility, Ericsson, Designclature, DPS Technologies, NetWest Solutions, Shiv Shakti, Skill Hut). Delivered wireframes, mockups, HTML/CSS layouts, and UI designs for clients across telecom, mobility, education, and commercial sectors. Built the visual design and frontend foundation that underpinned transition to React/UI engineering.

SELECTED PORTFOLIO PROJECTS

LoanLens - Loan Comparison & Financial Calculator

React/Next.js financial product demonstrating complex calculations, assumptions, comparisons, and information hierarchy for loan selection. Shows financial UX thinking: clear inputs, transparent calculations, accessible comparisons.

Pulse Metrics - Analytics & Data Dashboard

Data-dense dashboard interface with tables, charts, and filters. Demonstrates ability to structure complex information for clarity and usability.

Link: <https://pulse-metrics-beta.vercel.app/>

Veterinary Appointment Booking - booking/scheduling application for a clinic workflow.

Link: <https://veterinary-appointment-booking.vercel.app/>

Saints Paradise Cafeteria - cafeteria/food-ordering web app.
